

## **Colibacillosis**

Colibacillosis is one of the most common diseases of new born farm animals caused by E. Coli

### **Clinical findings:**

- Although this disease is common under 3 days of age but it occurs as early as 12-18 hours after birth it occurs in calves mainly during the first 3 weeks of life.
- Septicemic Colibacillosis is characterized by an acute generalized infection with diarrhea.
- Enteric Colibacillosis is characterized by pine-Apple juice diarrhea.

2) Whitish-watery diarrhea and its adherence on hair coat around the anus.
